ENSURE RESILIENCY AGAINST CYBER THREATS

We simplify IT complexity with end-to-end, sovereign-based solutions, backed by our expert engineering and robust support infrastructure.

Through our partnership Assured Data Protection (ADP) we operationalise Rubrik's Zero Trust Security solutions, delivering data security and protection to customers across the globe.

With a dedicated team to provide 24/7/365 support, we ensure customers can protect, detect and recover critical data and operations with minimal downtime.

Built on Rubrik's Security Cloud, our managed service solutions, enable organisations to control their entire backup environment ensuring resiliency against data loss, natural disasters and cyber attacks.

PROTECT YOUR DATA

Our managed services protect and secure your backup data in an immutable format, whether on site, off site or in the cloud.

DETECT ANOMALIES

Incorporating Rubrik's use of Machine Learning and AI, our solution detects anomalies, large data changes or suspicious behaviour in your backup environment.
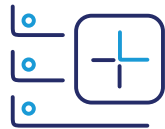

RECOVER OPERATIONS

Recover from ransomware and other cyber attacks, on-premises or in the cloud, from your immutable backups with near-zero RPOs & RTOs.

MANAGED BACKUP

Backup, archive and recover data on-premises or in your cloud environment.

OFF-SITE REPLICATION

Replicate critical data to a secure, off-site location to keep operations running.

DISASTER RECOVERY

Recover all your critical IT systems in minutes and hours, not days or weeks.
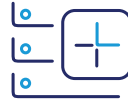

THREAT DETECTION

Monitor business critical data to prevent data loss and cyber attacks.

MANAGED BACKUP

Backup as a Service is an enterprise-grade backup, recovery and archive solution, purpose-built to protect organisations of all sizes, across single or multiple locations in private, public and hybrid cloud environments.

We provides Rubrik as a fully managed service including all hardware, software and support, tailored to meet your technical and commercial requirements.

OFF-SITE REPLICATION

Replication as a Service provides an up-to-date copy of your backup data in a secure, air-gapped location. Choose one of our off-site facilities or an alternative location.

In the event of production data loss, this gives you the capability to recover quickly from any point in time, to your chosen location.

DISASTER RECOVERY

Disaster Recovery as a Service ensures near-zero recovery times in the event of a significant IT failure. Leverage our DR platform, removing the need for a secondary data centre.

ADP's custom designed RecoverView platform enables orchestration and automation of recovery testing and live invocation. This includes a fully-documented audit and compliance report.

THREAT DETECTION

Threat Detection as a Service identifies anomalies and accelerates the recovery process to minimise business impact in the event of a ransomware or cyber attack.

Automatically detect anomalies in your backup data, without impacting production performance. Pinpoint where the attack happened and recover quickly back to a clean point in time.
